

Weekly report (2012.9.17~9.23)

Done

- 1) Developing an application to display an image with large resolution based on html5 and javascript, it's based on a multi-resolution strategy such as the google map. In my implementation, the large image is divided into several levels with distinguish resolutions and stored in oss(open storage service) powered by aliyun. Now, it can only zoom in/out, so much more work is to be done such as support drag explore.

To Do

- 1) Continue developing the app to display large images.
- 2) Do more reading to enrich my survey.
